General Boating Knowledge

"Common Sense before leaving shore"

Safety check

- Engines work, battery charged, hull, tires, drain plug, etc
- Safety equipment
 - example Life jackets fit correctly for everyone on board

Fuel

Rule of thumb;

- -1/3 there
- -1/3 back
- -1/3 spare.

***Know how much fuel you use!!!

Marine Weather Conditions

- VHF weather channel (wx)
- Environment Canada website
- Phone Coast Guard weather comox 339-0748

Trip Plans

give a responsible person;

- verbally where you are going and time back (short trips)
- in writing where you are going, route you are following and when you will be coming back (long trips).

Trip Plan

Filing a Trip Plan before you head out is a recommended procedure. The Trip Plan should be left with a responsible person and updated as the trip progresses and plans change to avoid

unnecessary search and rescue emergency calls.

An up-to-date Trip Plan can aid in search and rescue efforts if they are needed.

	Trip Pla	n	
Owner's Name	Tel. Number	Cell Ph	none
Owner's Address			
Vessel Name and Number			Power Sail
Size & Type	Colour: Hull _	Deck	Cabin
Type of Engine	Other Distinguishing	Features	
Radio Channels Monitored			
Safety Equipment On Board:	Life Raft (colour)	Dinghy (co	lour)
Number & Type of Flares,	& Lifejac	kets / PFDs	
Other			
Search & Rescue Phone Numb	per		
Date of Departure	Time of Departure	Estimated Ar	rival
Leaving From	Heading To	Proposed Route	<u> </u>
Stop Over	Stop Over	Stop Over	
Number of Persons on Board	Othe	er	2) - 10120 F= 20241 - 002420 - 1

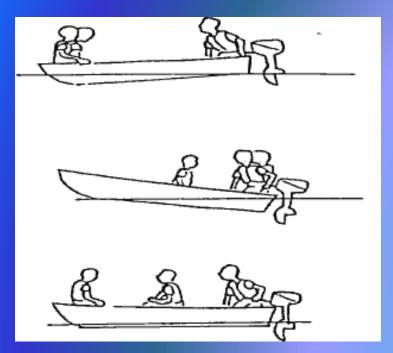

Inform Guests

 give a basic tour of the boat (safety equipment located, life jackets, how to operate, etc)

Loading a small boat

Distribute the weight evenly, especially in small boats

Steps to filling gas

- 1. secure boat
- 2. turn engine off
- 3. get people ashore
- 4. extinguish open flames
- 5. no smoking
- 6. electrical equipment off
- 7. ports and hatches closed
- 8. portable tanks ashore
- hole nozzle AGAINST filler pipe to prevent sparks
- 10. don't overfill
- 11. wipe spillage
- 12. open up ports and hatches and run blower for at least 4 minutes
- 13. smell for fumes

PRE-DEPARTURE CHECKLIST

Be prepared for the unexpected. Check this list before every trip.

	Lifejackets and PFDs – Wear Them!
	. Carry a Canadian-approved lifejacket or PFD of the proper size, for each person on board.
	. Make sure they are in good condition (check the zippers, buckles, fabric, seams, etc.).
	Operator Competency – Are You Ready to Head Out on the Water?
	. Take a boating safety course.
	. Always carry your Pleasure Craft Operator Card or other proof of competency on board.
	Weather - Check and Monitor the Marine Weather Forecast
	Sail Plan – File Your Plan Before Heading Out
	. Use the sample <u>sail plan</u> in this guide.
	. Tell a person you trust where you are going and when you will be back.
	Safety Equipment – Required by Law and Essential for Safety
	. See equipment required for your boat.
	. Make sure all equipment is on board, in good working order and easy to reach.
	Carry a first aid kit, basic tools and spare parts.
	Charts, Compass and Local Hazards – Know Where You Are at All Times
_	. Make sure you are aware of all local hazards, water levels and tides.
	Fuel - Check Your Tank and Remember:
	Fuel - Check Your Tank and Remember: . 1/3 to go, 1/3 to return, 1/3 reserve.
	. 1/3 to go, 1/3 to return, 1/3 reserve . Boat Condition – Should Your Boat Leave the Dock? . Check the hull for cracks or other damage.
	. 1/3 to go, 1/3 to return, 1/3 reserve. Boat Condition – Should Your Boat Leave the Dock? . Check the hull for cracks or other damage Check the electrical, fuel, propulsion and cooling systems.
	. 1/3 to go, 1/3 to return, 1/3 reserve. Boat Condition – Should Your Boat Leave the Dock? . Check the hull for cracks or other damage Check the electrical, fuel, propulsion and cooling systems Make sure the throttle and steering work well.
	. 1/3 to go, 1/3 to return, 1/3 reserve. Boat Condition – Should Your Boat Leave the Dock? . Check the hull for cracks or other damage Check the electrical, fuel, propulsion and cooling systems.
	* 1/3 to go, 1/3 to return, 1/3 reserve . Boat Condition – Should Your Boat Leave the Dock? * Check the hull for cracks or other damage. * Check the electrical, fuel, propulsion and cooling systems. * Make sure the throttle and steering work well. * Check the oil. * Check all hoses and lines for leaks or cracks, and replace if necessary. * Make sure all clamps and belts are secure and in good shape.
	* 1/3 to go, 1/3 to return, 1/3 reserve . Boat Condition – Should Your Boat Leave the Dock? * Check the hull for cracks or other damage. * Check the electrical, fuel, propulsion and cooling systems. * Make sure the throttle and steering work well. * Check the oil. * Check the oil. * Check all hoses and lines for leaks or cracks, and replace if necessary. * Make sure all clamps and belts are secure and in good shape. * Inspect, clean and replace spark plugs if necessary.
	* 1/3 to go, 1/3 to return, 1/3 reserve . Boat Condition – Should Your Boat Leave the Dock? * Check the hull for cracks or other damage. * Check the electrical, fuel, propulsion and cooling systems. * Make sure the throttle and steering work well. * Check the oil. * Check the oil. * Check all hoses and lines for leaks or cracks, and replace if necessary. * Make sure all clamps and belts are secure and in good shape. * Inspect, clean and replace spark plugs if necessary. * Check and change oil and water filters if needed.
	* 1/3 to go, 1/3 to return, 1/3 reserve . Boat Condition – Should Your Boat Leave the Dock? * Check the hull for cracks or other damage. * Check the electrical, fuel, propulsion and cooling systems. * Make sure the throttle and steering work well. * Check the oil. * Check the oil. * Check all hoses and lines for leaks or cracks, and replace if necessary. * Make sure all clamps and belts are secure and in good shape. * Inspect, clean and replace spark plugs if necessary.
	Boat Condition – Should Your Boat Leave the Dock? Check the hull for cracks or other damage. Check the electrical, fuel, propulsion and cooling systems. Make sure the throttle and steering work well. Check the oil. Check all hoses and lines for leaks or cracks, and replace if necessary. Make sure all clamps and belts are secure and in good shape. Inspect, clean and replace spark plugs if necessary. Check and change oil and water filters if needed. Check the battery's charge. Make sure the drainage plug is in place. Carry spare plugs for all through hull fittings.
	Boat Condition – Should Your Boat Leave the Dock? Check the hull for cracks or other damage. Check the electrical, fuel, propulsion and cooling systems. Make sure the throttle and steering work well. Check the oil. Check all hoses and lines for leaks or cracks, and replace if necessary. Make sure all clamps and belts are secure and in good shape. Inspect, clean and replace spark plugs if necessary. Check and change oil and water filters if needed. Check the battery's charge. Make sure the drainage plug is in place. Carry spare plugs for all through hull fittings. Make sure the load on your boat [gear and people] is well distributed.
	Boat Condition – Should Your Boat Leave the Dock? Check the hull for cracks or other damage. Check the electrical, fuel, propulsion and cooling systems. Make sure the throttle and steering work well. Check the oil. Check all hoses and lines for leaks or cracks, and replace if necessary. Make sure all clamps and belts are secure and in good shape. Inspect, clean and replace spark plugs if necessary. Check and change oil and water filters if needed. Check the battery's charge. Make sure the drainage plug is in place. Carry spare plugs for all through hull fittings.
	Boat Condition – Should Your Boat Leave the Dock? Check the hull for cracks or other damage. Check the electrical, fuel, propulsion and cooling systems. Make sure the throttle and steering work well. Check the oil. Check all hoses and lines for leaks or cracks, and replace if necessary. Make sure all clamps and belts are secure and in good shape. Inspect, clean and replace spark plugs if necessary. Check and change oil and water filters if needed. Check the battery's charge. Make sure the drainage plug is in place. 	Boat Condition – Should Your Boat Leave the Dock? Check the hull for cracks or other damage. Check the electrical, fuel, propulsion and cooling systems. Make sure the throttle and steering work well. Check all hoses and lines for leaks or cracks, and replace if necessary. Make sure all clamps and belts are secure and in good shape. Inspect, clean and replace spark plugs if necessary. Check and change oil and water filters if needed. Check the battery's charge. Make sure the drainage plug is in place. Carry spare plugs for all through hull fittings. Make sure the load on your boat (gear and people) is well distributed. Run the blowers for four minutes before starting the engine(s) and check for airflow.

General Boating Knowledge

"Common Sense on the water"

Divers in water

 boat must display Blue & White International Flag "A" (Alpha)

 When divers are in the water a Red with Diagonal White striped buoy is used to locate the area where they are.

Speed Limits

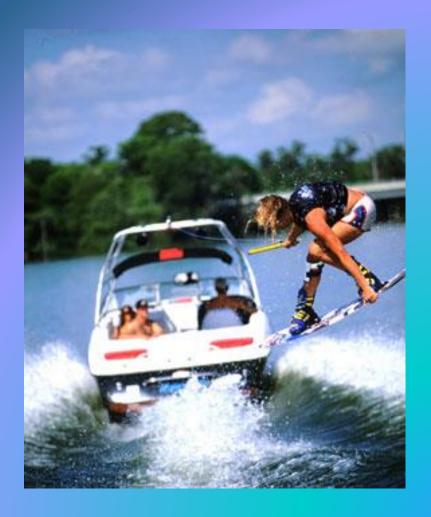

- Close to shore 10 kmslow
- Narrow river, canals,
 harbours slow

Towing someone (Wakeboard, Tubing)

minimum 2 people in boat, 1 driver, 1 spotter

Getting help – if needed

- Wave arms
- Flares
- VHF radio (channel 16)
- cell phone (only in populated areas)

Helping Others

- Legally you must stop to help others.
- Only exception putting yourself at risk.

Accidents (Reporting)

- You stop, give name and address, and offer assistance.
- Report it to the police

Poor weather/Fog

 Slow down, life jackets on, lights on and switch to full fuel tank

Capsizing/sinking

 Radio for help if possible (mayday 3 times – name, description, location, problem), life jackets on, stay with boat if possible

Engine Failure

- #1 cause no fuel
- poor maintenance
- overheating faulty impeller or debris over water intake

General Boating Knowledge

"Common Sense on the water"

Continued

Anchoring

Attach to a secure place on the bow (cleat) especially in rough water or high current area.

Hypothermia

- happens when you are wet (don't have to fall into water)
- early sign shivering, slurred speech
- intermediate signs weak pulse, irrational, lack coordination
- final weak/absent pulse, loss of consciousness
- treatment shelter from cold, dry clothes, warm slowly. No HOT liquids or alcohol

Basic Navigation Equipment

- compass, charts most basic and can't fail
- depth sounder, gps, chart plotter – electronic, can fail (dead battery, blown fuse, electrical short, etc)

Understanding Wind Speeds

Light 1 – 21 km up to 11 knots

Moderate 22 – 36 km 12 - 19 knots

Strong 37 – 62km 20 – 33knots = small craft warning *

Gale 63 – 87km 34 – 47 knots = Gale warning *

Storm 89 - 117km 48 - 63 knots = Storm warning *

Hurricane over 117km over 63 knots = Hurricane warning*

Note: the last 3 are announced on all weather announcements

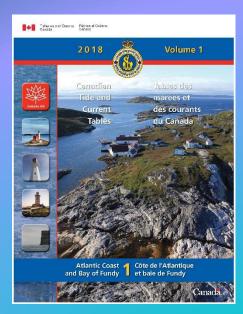

Extra Stuff

"Need to Know"

Canadian Tide and current Tables.
 Gives all the tides/currents for marine travel

 Restricted Operators Certificate (Marine) needed for ANYONE using a radio

- Pleasure craft Courtesy Checks
 - Make sure you have all safety equipment

Anchors – different types based on the bottom

Navigation Lights

 Government/Police boats have a Blue Flashing Light

- All around white light for Anchoring
- Fishing Vessel Lights
 - 2 all-round lights in a vertical line, the upper is red and the lower is white.

Sound Signals

- One short blast I intend to change course to starboard
- Two short blasts I intend to change course to port.
- Three short Blasts Lam backing up (astern propulsion)

Carbon monoxide gas

 Produced from any gas burning appliance or engine. Can be fatal in a confined and enclosed space.

Symptoms

- fatigue
- nausea
- headaches
- dizziness or fainting
- vomiting

Radar Reflector

- Used on boats that are built of mostly non-metallic materials
- Sometimes cannot be used due to impracticality

Transport Canada

- Approve many things for boating including;
 - PFDs and Life Jackets
 - Distress flares
 - Pleasure Craft Tests
 - etc

- Distress Flares valid four years from the date of manufacture
- Flares should be located within reach and stored vertically in a cool, dry place to keep them in good working condition.

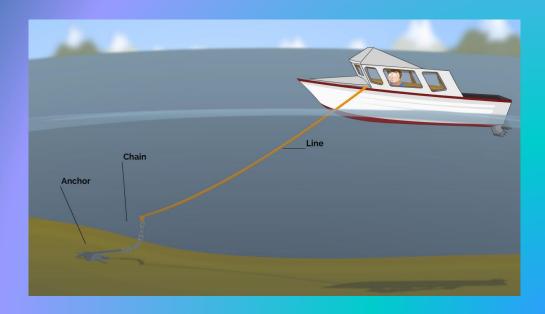

Magnetic Compass – gives boats heading

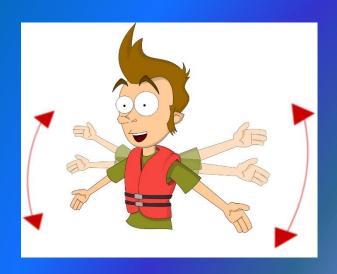

Anchor Line

 minimum length 5 to 10 times the depth of the water when dropping anchor line on a pleasure craft.

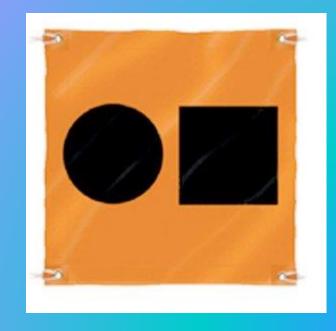

Distress Symbols/Flags

Running aground

- Check the people onboard to make sure no one is injured.
- Assess what damage that might have occurred.

Heat Exhaustion

having trouble keeping up with the rest and complaining of dizziness, muscle cramps, headache

Manual Propelling device

should be accessible and available at any time.

Muffler

Every boat equipped with a motor other than a stock (unmodified) outboard engine must have a muffler and use it while operating within five nautical miles (9.26 km) of shore
